TEST THE AUTHENTICITY OF WILDFIRE DAMAGES

Damages that seem to be caused by recent wildfires may come from other sources- all of which can leave behind a fine-grained solid particulate residue.

The residue from these sources can have the potential to create a visual phenomenon known as “ghosting” that appears as black discoloration on flooring, vents, electrical outlets, vent grills, ceilings, and walls.

How can Envirocheck help?

Envirocheck will analyze this residue, called combustion byproduct, and can give you the origin of the residue. In doing this, we provide assistance with adjusting claims and verifying damages for many adjusters, property managers, and attorneys.

Avoid expensive cleanup costs and/or determine the legitimacy of a claim by using the leaders in the industry. Call Envirocheck today.

Some causes of “ghosting”:

- ✓ gas appliances ✓ fireplaces ✓ burning incense ✓ cigarette smoke
- ✓ printer cartridges ✓ wildfires ✓ burning candles ✓ fuels such as oil
